WEAR

Subject Index of Volume 190

Abrasive wear
a multi-scale measure of particle abrasivity, and its relation to two-body abrasive wear, 190
Abrasivity
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
Advanced Materials
advances in tribology: the materials point of view, 155
Alternate substrates
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
Alumina
fretting wear and friction behaviour of engineering ceramics, 212
Artificial joints
frictional resistance of new and explanted artificial hip joints, 226
Asperity deformation
explaining the mechanics of metallic sliding friction and wear in terms of slipline field models of asperity deformation, 145

Boundary lubrication
metallic sliding friction under boundary lubricated conditions: Investigation of the influence of lubricant at the start of sliding, 197

Ceramics
advances in tribology: the materials point of view, 155
a comparative study of the performance of metallic and ceramic femoral head components in total replacement hip joints, 171
fretting wear and friction behaviour of engineering ceramics, 212
Coatings
advances in tribology: the materials point of view, 155
Comparison of surface profilers
comparison of surface roughness measurements by stylus profiler, AFM and non-contact optical profiler, 76
Composites
recent advances in polymer composites' tribology, 139
Contact mechanics
contact mechanics and the wear of metals, 162

Delamination wear
contact mechanics and the wear of metals, 162

Elastohydrodynamic
study of lubricated impact using optical interferometry, 184
Elastohydrodynamic lubrication
elastohydrodynamic and micro-elastohydrodynamic lubrication, 125

Elsevier Science S.A.

Explanted hip prostheses
frictional resistance of new and explanted artificial hip joints, 226

Fibre reinforcement
recent advances in polymer composites' tribology, 139
Film transfer
fretting wear and friction behaviour of engineering ceramics, 212
Fretting
comprehensive tribological characterization of thin TiN-based coatings, 204
Fretting wear
fretting wear and friction behaviour of engineering ceramics, 212
Friction
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
the tribological and dynamic behavior of alternative magnetic tape substrates, 28
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
frictional resistance of new and explanted artificial hip joints, 226
Friction and wear
mechanical and tribological properties of hard carbon coatings for magnetic recording heads, 110

Glass–ceramic thin film disk substrate
comparison of surface roughness measurements by stylus profiler, AFM and non-contact optical profiler, 76

Hard carbon coatings
mechanical and tribological properties of hard carbon coatings for magnetic recording heads, 110
Head cleaning agent
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
Head–disk interface
on tribological problems in magnetic disk recording technology, 232
Head–tape interface
friction and wear studies of various head materials and magnetic tapes in a linear mode accelerated test using a new nano-scratch wear measurement technique, 1
Hip joints
frictional resistance of new and explanted artificial hip joints, 226
Hip replacement
a comparative study of the performance of metallic and ceramic femoral head components in total replacement hip joints, 171

Historical background
elastohydrodynamic and micro-elastohydrodynamic lubrication, 125

Impact
study of lubricated impact using optical interferometry, 184
Instrument resolution
surface roughness analysis of glass–ceramic substrates and finished magnetic disks, and Ni–P coated Al–Mg and glass substrates, 89

Line contacts
elastohydrodynamic and micro-elastohydrodynamic lubrication, 125
Lubricants
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
tribological performance of magnetic thin-film glass disks: its relation to surface roughness and lubricant structure and its thickness, 60
Lubrication
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
study of lubricated impact using optical interferometry, 184

Magnetic disk recording
on tribological problems in magnetic disk recording technology, 232
Magnetic disks
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
tribological performance of magnetic thin-film glass disks: its relation to surface roughness and lubricant structure and its thickness, 60
surface roughness analysis of glass–ceramic substrates and finished magnetic disks, and Ni–P coated Al–Mg and glass substrates, 89
Magnetic head
friction and wear studies of various head materials and magnetic tapes in a linear mode accelerated test using a new nano-scratch wear measurement technique, 1
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
Magnetic tape
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
Magnetic tape substrates
the tribological and dynamic behavior of alternative magnetic tape substrates, 28
Material properties vs. wear
friction and wear studies of various head materials and magnetic tapes in a linear mode accelerated test using a new nano-scratch wear measurement technique, 1
Mechanical properties
the tribological and dynamic behavior of alternative magnetic tape substrates, 28
mechanical and tribological properties of hard carbon coatings for magnetic recording heads, 110
Metallic sliding friction
metallic sliding friction under boundary lubricated conditions: Investigation of the influence of lubricant at the start of sliding, 197

Metals
contact mechanics and the wear of metals, 162
a comparative study of the performance of metallic and ceramic femoral head components in total replacement hip joints, 171
Micro-elastohydrodynamic lubrication
elastohydrodynamic and micro-elastohydrodynamic lubrication, 125
Model asperity
metallic sliding friction under boundary lubricated conditions: Investigation of the influence of lubricant at the start of sliding, 197
Modulus of elasticity
the tribological and dynamic behavior of alternative magnetic tape substrates, 28
MoS_2
tribological characteristics of bonded MoS_2 films evaluated in rolling–sliding contact in a vacuum, 219

Optical interferometry
study of lubricated impact using optical interferometry, 184

Particle abrasivity
a multi-scale measure of particle abrasivity, and its relation to two-body abrasive wear, 190
Pigment volume concentration
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
Plastic deformation
explaining the mechanics of metallic sliding friction and wear in terms of slipline field models of asperity deformation, 145
contact mechanics and the wear of metals, 162
Point contacts
elastohydrodynamic and micro-elastohydrodynamic lubrication, 125
Polymeric films
the tribological and dynamic behavior of alternative magnetic tape substrates, 28
Polymers
recent advances in polymer composites' tribology, 139
advances in tribology: the materials point of view, 155
a comparative study of the performance of metallic and ceramic femoral head components in total replacement hip joints, 171
PTFE compounds
comprehensive tribological characterization of thin TiN-based coatings, 204

Ratchetting
contact mechanics and the wear of metals, 162
Recording heads
mechanical and tribological properties of hard carbon coatings for magnetic recording heads, 110
Rolling
comprehensive tribological characterization of thin TiN-based coatings, 204
Rolling–sliding contact
tribological characteristics of bonded MoS_2 films evaluated in rolling–sliding contact in a vacuum, 219
Roughness
tribological performance of magnetic thin-film glass disks: its relation to surface roughness and lubricant structure and its thickness, 60

Roughness analysis
surface roughness analysis of glass–ceramic substrates and finished magnetic disks, and Ni–P coated Al–Mg and glass substrates, 89
Roughness measurement
surface roughness analysis of glass–ceramic substrates and finished magnetic disks, and Ni–P coated Al–Mg and glass substrates, 89

Sampling interval
comparison of surface roughness measurements by stylus profiler, AFM and non-contact optical profiler, 76
Sampling resolution
surface roughness analysis of glass–ceramic substrates and finished magnetic disks, and Ni–P coated Al–Mg and glass substrates, 89
Scan size
comparison of surface roughness measurements by stylus profiler, AFM and non-contact optical profiler, 76
surface roughness analysis of glass–ceramic substrates and finished magnetic disks, and Ni–P coated Al–Mg and glass substrates, 89
Sliding
comprehensive tribological characterization of thin TiN-based coatings, 204
Sliding friction
explaining the mechanics of metallic sliding friction and wear in terms of slipline field models of asperity deformation, 145
Slipline field models
explaining the mechanics of metallic sliding friction and wear in terms of slipline field models of asperity deformation, 145
Solid lubricant film
tribological characteristics of bonded MoS_2 films evaluated in rolling–sliding contact in a vacuum, 219
Space tribology
tribological characteristics of bonded MoS_2 films evaluated in rolling–sliding contact in a vacuum, 219
Spike parameter
a multi-scale measure of particle abrasivity, and its relation to two-body abrasive wear, 190
Squeeze
study of lubricated impact using optical interferometry, 184
Stains
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
Stick–slip motion
metallic sliding friction under boundary lubricated conditions: Investigation of the influence of lubricant at the start of sliding, 197
Stylus size
comparison of surface roughness measurements by stylus profiler, AFM and non-contact optical profiler, 76
Surface topography
on tribological problems in magnetic disk recording technology, 232

Tape
friction and wear studies of various head materials and magnetic tapes in a linear mode accelerated test using a new nano-scratch wear measurement technique, 1
Thin-film disks
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
TiN coatings
comprehensive tribological characterization of thin TiN-based coatings, 204
Tribology
tribological performance of magnetic thin-film glass disks: its relation to surface roughness and lubricant structure and its thickness, 60
advances in tribology: the materials point of view, 155
study of lubricated impact using optical interferometry, 184
Tribology of tape drives
friction and wear studies of various head materials and magnetic tapes in a linear mode accelerated test using a new nano-scratch wear measurement technique, 1
Tribosimulation
comprehensive tribological characterization of thin TiN-based coatings, 204

Vacuum lubricant
tribological characteristics of bonded MoS_2 films evaluated in rolling–sliding contact in a vacuum, 219

Wear
role of tape abrasivity on friction, wear, staining and signal degradation in audio tapes, 16
friction and wear studies of magnetic thin-film rigid disks with glass–ceramic, glass and aluminum–magnesium substrates, 44
Wear measurement technique
friction and wear studies of various head materials and magnetic tapes in a linear mode accelerated test using a new nano-scratch wear measurement technique, 1

Zirconia
fretting wear and friction behaviour of engineering ceramics, 212
